- ◆ Low Passive IM., PIM
- ◆ Low Cost Design

The BK-27N Diplexer has been designed to be small and lightweight, using passive, proprietary techniques to ensure minimal loss and very high reliability.

BK-27N allows efficient combining of WiFi services at the standard WiFi standards of 802.11 (a), (b), (g) and (n) at 2.4 GHz and 5.8 GHz together with WiMAX at 2.6 and 4.9 GHz with a coaxial distributed in-building cellular network or DAS. This can provide the benefit of the same controlled coverage of the higher frequency services with the DAS.

A simple bracket and tapped holes are provided for simple mounting to a surface or cable tray. The unit is also available painted for outdoor applications, as Model BK-27NP, and with SMA connectors to special order. (01/13)
