These broadband RF Combiner Boxes have been designed to meet the neutral host needs of smaller in-building systems, with low passive intermodulation (PIM). The system combines up to 2 wireless carriers in two operating bands to 2 multiple antenna feeds or distribution cables. Through the use of hybrids and diplexers, the total loss for each path is less than 1.4dB, provided both outputs are utilized. Typical isolation between inputs in the same band is 25 dB, between bands 55 dB. Similar units may be ordered with N connectors as KM-97N or as wall mount KB-97D and KB-97N. (06/13)
